# GEMINI® SL® Total Knee Replacement

Cementable – SpheroGrip™/cementless – TiCaP®/PorEx® Surface Modification

### System Description

- 02 GEMINI® SL® Total Knee Replacement
- 06 Cementable Anchorage - SpheroGrip™
- 06 Cementless Anchorage – SMS + TiCaP®
- 07 TiCaP® Double Coating
- 07 PorEx® Surface Modification (TiNbN = Titanium Niobium Nitride)
- 08 Indications/Contraindications
- 09 MIT-K® Minimally Invasive Technique – Knee
- 09 Navigation

### Implants

#### Femoral Components, cementable/cementless

- 10 Femoral Components: Mobile and Fixed Bearing

#### Tibial Components, cementable/cementless

- 11 Tibial Components: Mobile Bearing
- 12 PE Articulating Surfaces: Mobile Bearing
- 14 Tibial Components: Fixed Bearing and PS Version
- 15 PE Articulating Surfaces: Fixed Bearing

#### Fixed Bearing PS (Posterior Stabilized), cementable/cementless

- 17 Femoral Components: Fixed PS
- 18 PE Articulating Surfaces: Fixed PS
- 20 Taper Caps for Tibial Components, Patella Components
- 21 Prosthesis Stems for Tibial Stem Extensions, cementable/cementless

### Instruments

- 22 GEMINI® SL® Instrument Set, complete
- 23 GEMINI® SL® Instrument Set, trays 1–7
- 30 Additional Instruments

### Accessories/Literature

- 31 X-ray Templates
- 32 Further Information about GEMINI® SL®
- 33 Index

## ■ GEMINI® SL® Total Knee Replacement

The **LINK® GEMINI® Total Knee Replacement**, including implants and system-specific instruments, is part of the **LINK® SL® Knee Family concept**.

**SL®** stands for **S**ystem-integrated **S**oLution

- One implant system for standard implantation and revision

Essential criteria for obtaining good results in knee arthroplasty are long-term fixation, anatomically correct implant components and a reproducible implantation technique.

The **LINK® GEMINI® SL®** knee implant for cementable or cementless primary replacement of damaged knees combines tried-and-tested and innovative design principles.

The design of the femoral and tibial components and a wide choice of sizes ensure primary stability. The tibial components are available with either a **Mobile Bearing** or a **Fixed Bearing**. The optimal surface texture and our **TiCaP® double coating** – Titanium (Ti) / Calcium Phosphate (CaP) provide secondary fixation for cementless implantation.

## ■ System Description

### ■ GEMINI® SL® Total Knee Replacement

#### Flexibility

The resections made for GEMINI® SL® Total Knee Replacement allow the surgeon to switch intraoperatively to the SL® rotating hinge or hinged knee implants and to use the MEGASYSTEM-C® variants if indicated, with the aid of just a few additional instruments, because each knee system within the SL® Knee Family is compatible with the very same bone resection (see page 8).

#### Modularity

The GEMINI® SL® product range guarantees optimal compatibility and is an excellent treatment option for the patient. A uniform femoral component for **Fixed Bearing** and **Mobile Bearing** and a different femoral component for **Fixed Bearing PS** (Posterior Stabilized) are available. A compatible PE articulating surface must be selected in each case. This gives the surgeon great intraoperative flexibility. The GEMINI® SL® system caters to a range of femoral and tibial dimensions – in general, the femoral component of the same size or one size smaller than the tibial component is used.

#### Femoral Components

A major contributing factor to the long-lasting function of the GEMINI® SL® system is the frictional connection between the fixation surfaces and the resected femoral condyles, and also the external form of the femoral component, which is designed to replicate the anatomy of the knee and implant function. The high patella shield prevents the patella from “clicking” in cases of patella alta. The anatomically shaped patellar groove provides for physiological tracking of the bony patella or patella resurfacing component in all positions.

The femoral component comes in two variants for cementable or cementless fixation.

## ■ GEMINI® SL® Total Knee Replacement

The **PS (Posterior Stabilized)** design with its secure coupling mechanism prevents femoral ventral subluxation in flexion in the absence of the posterior cruciate ligament. This design consists of a posterior post on the tibia and a stabilizing bar (cam) on the femoral component. The special design of the intracondylar box geometry in the femoral component allows for bone-sparing resection.

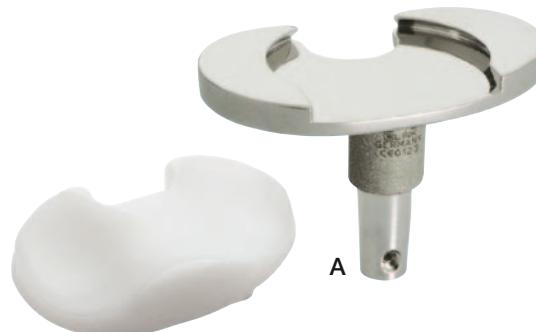

### Tibial Components

The GEMINI® SL® tibial components are adapted to the anatomy of the tibial head, and left and right variants are available. The central taper and the bars radiating out toward dorsal have been shown in various tests\* to protect against shear forces, rotation and, above all, the alternating varus/valgus loads that cause loosening. The tapered pegs at the ends of the bars transmit forces laterally into the load-bearing cortical bone.

The product line with **SpheroGrip™** permits tibial replacement with a monobloc tibial component. The integrated stem shape ensures a high degree of stability.

The concave surface of mobile bearing tibial plateau (**A**) provides congruency of the articulating surfaces in extension while allowing the femoral condyles to glide in increasing flexion. Distribution of the load over a large area reduces polyethylene wear. The rotating articulating surface separates function from movement in the articulating areas, enabling the soft tissue structures to take over motion control, which allows for natural kinematics. In addition, the implant fixation is spared. **The deep trough in the tibial plateau stabilizes the knee, even in cases of posterior cruciate ligament deficiency.\*\***

## ■ System Description

### ■ GEMINI® SL® Total Knee Replacement

In cases of good joint stability, where the ligaments and capsule are intact, a tibial tray with a replaceable fixed bearing PE articulating surface is available (**B**).

**Note:** The size of the tibial plateau is determined primarily by the femoral component.

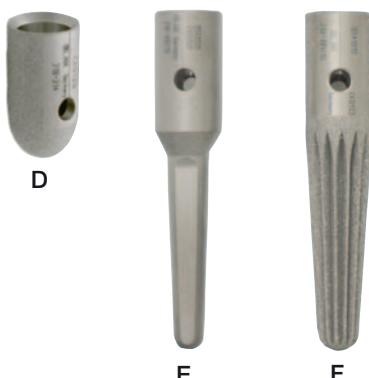

In the absence of the posterior cruciate ligament, function is assured by the post coupling mechanism. This induces **mechanical rollback** while preventing dorsal subluxation of the tibia. Ventrally, the PS (Posterior Stabilized) polyethylene articulating surface (**C**) has a deep cutout to give the extension apparatus enough space in flexion.

#### Taper Cap/Prosthesis Stems

The following options are available in case of instability or poor bone conditions to improve the stability:

- taper cap (**D**)
- cementable stem (**E**)
- cementless stem (**F**)

## ■ GEMINI® SL® Total Knee Replacement

### Anchorage

The bone-contact surface of the implants is optimized to suit the individual type of anchorage (cementable or cementless).

### Cementable Anchorage - SpheroGrip™

The unique macrostructure provides an optimal interface between bone cement and implant. The shear and rotational forces transmitted into the bone cement are reduced, thus ensuring stable long-term anchoring of the implant.

### Cementless Anchorage – SMS + TiCaP®

The bone contact surfaces on the tibial and femoral components have an **SMS** (Squarical Monobloc Structure) honeycomb macrostructure for cementable fixation. For cementless fixation, implants with **TiCaP® double coating** – Titan (Ti)/Calcium Phosphate (CaP) are available.

This double coating creates an outstanding potential for biological exchange between bone and implant surface.

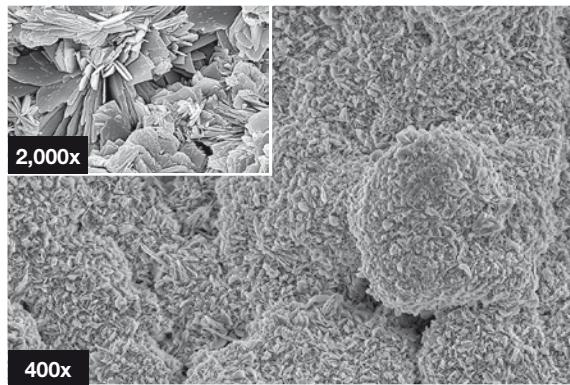

## ■ System Description

### ■ GEMINI® SL® Total Knee Replacement

#### TiCaP® Double Coating:

#### Titanium (Ti)/Calcium Phosphate (CaP)

The TiCaP® coating is applied to implants by first spraying a highly porous layer of titanium approximately 200 µm\* thick onto the surface of the implant using vacuum plasma technology. On top of this porous surface, an approx. 20 µm\*\* thick layer of mechanically stable calcium phosphate is deposited in an electrochemical process, which promotes ingrowth into the open-cell titanium layer. Animal experiments have demonstrated ingrowth on 47.9% of the implant surface.\*\*

\* The thickness of the titanium layers varies in different types of implant.

\*\* Cunningham HB,W et al.: "General Principles of Total Disc Replacement Arthroplasty", Spine, Vol. 28, No. 20 Supplement, 2003

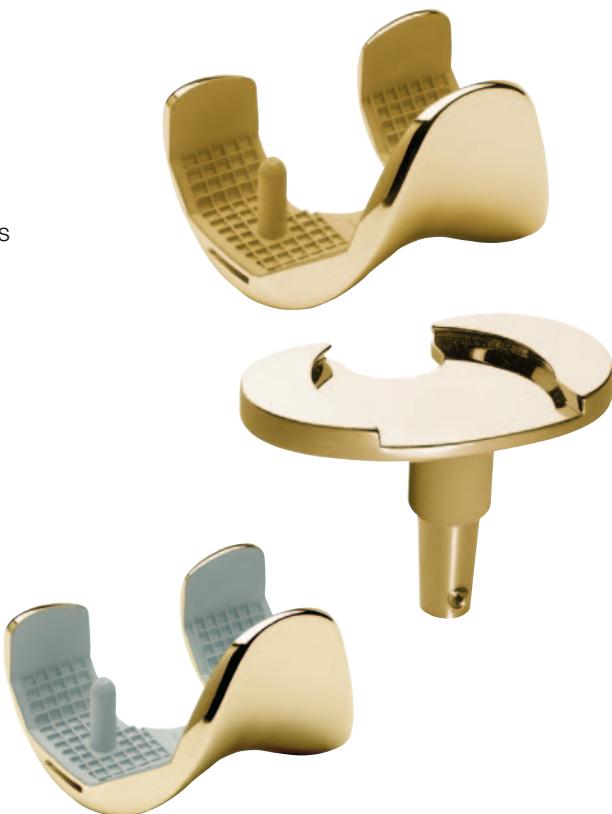

#### PorEx® (TiNbN = Titanium Niobium Nitride)

#### Surface Modification

The PorEx® hypoallergenic surface modification leads to a ceramic-like surface, which significantly reduces the release of ions and can improve tolerance in patients who are sensitive to metal.<sup>1</sup>

This surface is extremely hard and possesses abrasion properties similar to those of ceramics. These qualities and the wetting angle of the surface give it a low friction coefficient when in contact with fluids.<sup>1</sup>

<sup>1</sup> Internal technical report.

## ■ GEMINI® SL® Total Knee Replacement

### Resections compatible with Endo-Model® SL® rotating and hinge knee

The tibial and femoral resections for sizes 2, 3 and 4 of the LINK® GEMINI® SL® Total Knee Replacement are identical to those required for the corresponding sizes of Endo-Model® SL® rotating hinge knee:

Size 2 GEMINI® SL® corresponds to size **small ROKNEP® SL®**

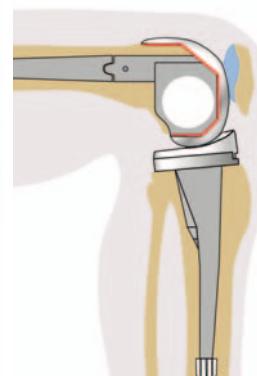

Size 3 GEMINI® SL® corresponds to size **medium ROKNEP® SL®**

Size 4 GEMINI® SL® corresponds to size **large ROKNEP® SL®**

After resection of the femur (for which the additional instrument set 16-0001/02, Endo-Model® SL® rotating knee is necessary), it is possible to switch intraoperatively or revise with the SL® constrained total knee system.

GEMINI® SL®

ROKNEP® SL®

## ■ Indications/Contraindications

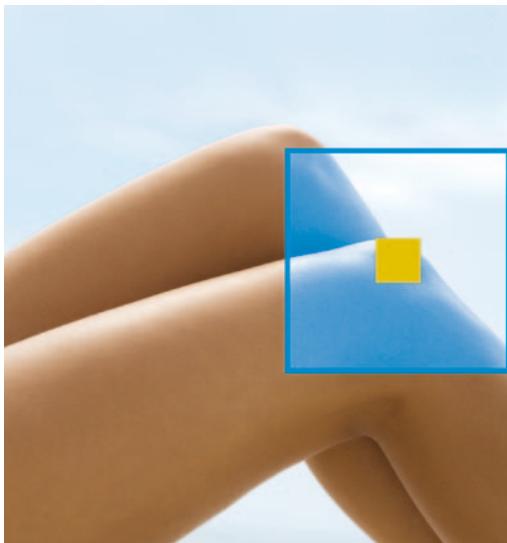

### Note:

For specified indications/contraindications, see catalogs:

- 737\_GEMINI® SL® Total Knee Replacement, Surgical Technique

## ■ System Description

### ■ MIT-K® Minimally Invasive Technique – Knee

- Accurate and preserving
- Precise, tissue-sparing implantation

The success of total knee arthroplasty depends upon:

- **Correct alignment** of the leg axis
- **Good soft-tissue balancing**
- **Stable primary fixation** of the implant

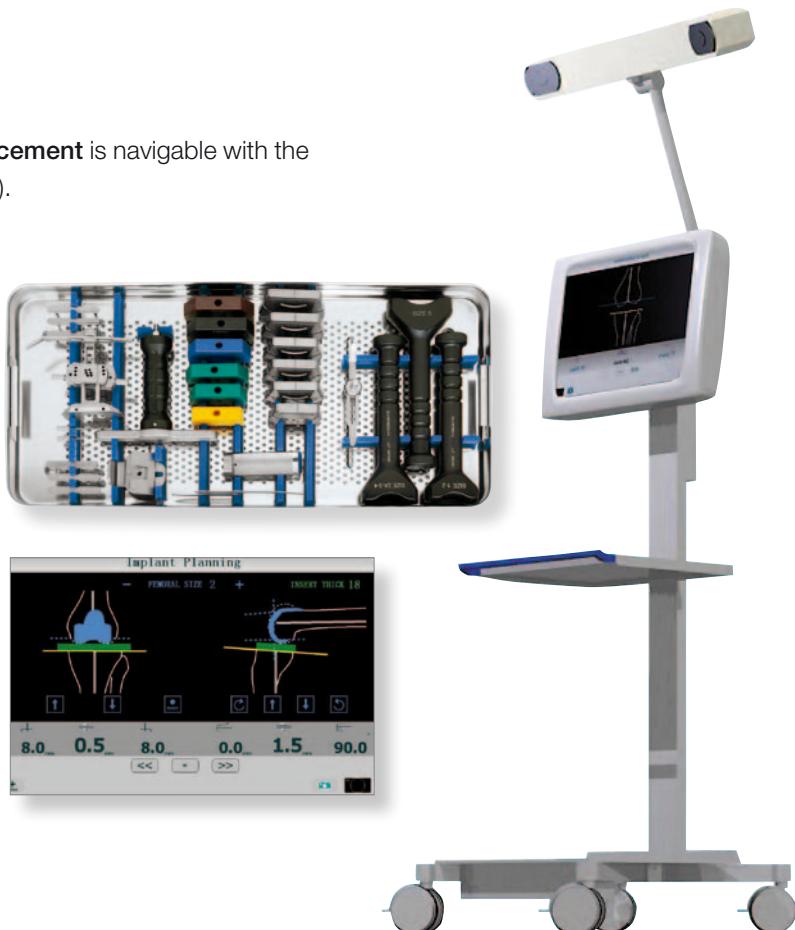

The **MIT-K® Minimally Invasive Technique – Knee** presents a tissue-sparing surgical technique for implanting the GEMINI® SL® prosthesis via a small incision. This leads to less blood loss, both during and after surgery, while preserving muscles, tendons and ligaments. The risk of infection and embolism is reduced, wound healing is improved, and the patient recovers faster.

### ■ Navigation

The **LINK® GEMINI® SL® Total Knee Replacement** is navigable with the imaging-free navigation BLU-IGS (Orthokey).

The newly developed, state-of-the-art instrument set and the optional **computer-assisted navigation system BLU-IGS** facilitate precise alignment of the axes and positioning of the resection guides. The instruments are compact, so they do not impinge on surrounding soft tissue.

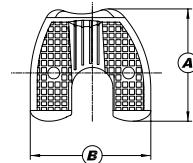

**These features enable the surgeon to ensure that the patient gets the maximum life from the artificial joint, optimal implant function, and the minimally invasive technique provides short convalescence.**

## ■ GEMINI® SL® Total Knee Replacement

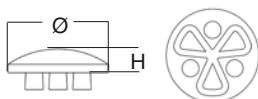

Taper Caps for tibial components

cementable	
Item no.	CoCrMo
318-314	Ø 16 mm, length (L) 28 mm

cementless	
Item no.	with TiCaP® * CoCrMo
318-314/01	Ø 16 mm, length (L) 28 mm
Item no. Tilastan®	
318-315	Ø 16 mm, length (L) 28 mm

The taper of the tibial component for coupling with modular stems can be covered with the taper cap, thus providing a short prosthesis stem (overall length = 49 mm). The cap is fixed to the taper by means of a hex screw using hex screwdriver 64-1181/06 (hex. 2.0 mm). The cap is provided separately in sterile packaging.

\* TiCaP® double coating: Titan (Ti)/Calcium Phosphate (CaP)

Patella Resurfacing Components, 3-peg

Item no. UHMWPE	Size	Ø mm	Height mm
318-401/25	1	25	7
318-401/28	2	28	8
318-401/31	3	31	9
318-401/34	4	34	10

Instrument set for patella components available on request.

## **Important Information**

---

**Please note the following regarding the use of our implants:**

**1. Choosing the right implant is very important.**

The size and shape of the human bone determine the size and shape of the implant and also limit the load capacity. Implants are not designed to withstand unlimited physical stress. Demands should not exceed normal functional loads.

**2. Correct handling of the implant is very important.**

Under no circumstances should the shape of a finished implant be altered, as this shortens its life span. Our implants must not be combined with implants from other manufacturers.

The instruments indicated in the Surgical Technique must be used to ensure safe implantation of the components.

**3. Implants must not be reused.**

Implants are supplied sterile and are intended for single use only. Used implants must not be reused.

**4. After-treatment is also very important.**

The patient must be informed of the limitations of the implant. The load capacity of an implant cannot compare with that of healthy bone!

**5. Unless otherwise indicated, implants are supplied in sterile packaging.**

Note the following conditions for storage of packaged implants:

- Avoid extreme or sudden changes in temperature.
- Sterile implants in their original, intact protective packaging may be stored in permanent buildings up until the "Use by" date indicated on the packaging.
- They must not be exposed to frost, dampness or direct sunlight, or mechanical damage.
- Implants may be stored in their original packaging for up to 5 years after the date of manufacture. The "Use by" date is indicated on the product label.
- Do not use an implant if the packaging is damaged.

**6. Traceability is important.**

Please use the documentation stickers provided to ensure traceability.

**7. Further information** on the material composition is available on request from the manufacturer.

**Follow the instructions for use!**

Waldemar Link GmbH & Co. KG, Hamburg

All content in this catalog, including text, pictures and data, is protected by law. Every instance of use, whether in part or in whole and which is not permitted by law, is subject to our prior consent. In particular, this applies to the reproduction, editing, translation, publishing, saving, processing, or passing on of content stored in databases or other electronic media and systems, in any manner or form. The information in the catalogs is solely intended to describe the products and does not constitute a guarantee.

The Surgical Technique described has been written to the best of our knowledge and belief, but it does not relieve the surgeon of his/her responsibility to duly consider the particularities of each individual case.

Unless otherwise indicated, all instruments are made of surgical stainless steel.
